Detail Action

This Office Action is in response to the Amendment filed on 08/16/2004. Claims
 1-6 are presented for examination.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kurosawa et al. (US 6,047,288), herein after referred as Kurosawa, in view of Fisher et al. (US 6,212,511), herein after referred as Fisher.
- 4. As to claim 1, Kurosawa teaches a system and method of group environment specifying and setting, comprising:
- group specifying means for specifying, in the case of a predetermined user having logged in, a group to which the user belongs (Kurosawa, Fig. 20, C12:L30 C13:L34 and C24: L35-43);

Art Unit: 2141

using environment specifying means for specifying a using environment corresponding to the group specified by the group specifying means (C13: L35-54);

using environment setting means for setting an environment which conforms to the using environment specified by the using environment specifying means (C14:L55 – C15:L16); and

creating databases according to groups (as illustrated in Figs. 20-21).

However, Kurosawa does not explicitly teach designating one of the databases, which an application program uses.

In a related art, Fisher teaches an access control database defines access rights through the use of access control objects, wherein the database management system (DBMS) 280 of Fig. 9 stores tables of information and has an access privileges module 284 which configures/establishes access rights to each of the tables, where each table stores a different type event notification, in the DBMS indicating which users have access to the tables that make up the event log 282 (Fisher, C16: L22-32 and C17: L5-67).

Therefore, it would have been obvious to one having ordinary skills in the art at the time the invention was made to combine the teachings of Kurosawa and Fisher to create databases according to groups and to designate one of the created databases, which an application program uses since such methods were conventionally employed in the art to define, create a database object and register the database object with the event registry to indicate a list of groups with access rights to a list of event notifications (i.e., requests/operations or accessing program applications) to prevent unauthorized

Art Unit: 2141

persons from accessing the management information objects in a network in avoiding confidential information be obtained by unauthorized persons and/or the network be open to acts of sabotage.

- 5. As to claim 2, Kurosawa-Fisher teaches the system of claim 1, wherein the group comprises one or more users (Kurosawa, Fig. 20).
- 6. As to claim 3, Kurosawa-Fisher teaches the system of claim 1, wherein the database are divided physically or logically according to groups, and the using environment setting means sets one of the databases corresponding to the groups specified by the group specifying means (i.e., defining and initializing a corresponding set of DBMS tables 282, i.e., an event log, for storing the requested event notifications, one distinct DBMS table per distinct event notification type) (Fisher, C17: L12-16).
- 7. As to claim 4, Kurosawa-Fisher teaches the system of claim 1, wherein the group specifying means comprises a table which associates user information regarding each user with the group to which each user belongs and specifies the appropriate group by referring to the user information (i.e., the access privileges module 284 may have an access privileges table that stores access rights information indicating which users have access to which tables that make up the event logs 282), which the user entered when the user logged in (i.e., contained in each access request 120), and the table (Fisher, C5: L18-31, C9: L35-62 and C16: L22-32).

Art Unit: 2141

ipplication of the moon, confe

8. As to claim 5, Kurosawa-Fisher teaches the system of claim 1, further comprising processing means (an Access Control Decision Function "ACDF" of the MIS 150 is the

Page 5

procedure or a set of procedures that apply the access control rules to each access

request so as to determine whether to grant or deny the request) for performing a

process corresponding to a request from the user, wherein the processing means

performs a process in the environment for each group set by the using environment

setting means (the MIS 150 receives all management object access requests 120, and

distributes each request, or portions of the request to a set of auxiliary servers 152 in

accordance with the portion of the management object tree referenced by the request)

(Fisher, C5: L3-7, C6: L34-43 and C8: L33-49).

9. Claim 6 is a corresponding computer-readable record medium claim of system

claim 1; therefore, it is rejected under the same rationale.

Art Unit: 2141

10. Applicant's arguments as well as request for reconsideration filed on 08/16/2004

have been fully considered but they are moot in view of the new ground(s) of rejection.

11. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

12. Further references of interest are cited on Form PTO-892, which is an

attachment to this office action.

13. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Quang N. Nguyen whose telephone number is (703)

305-8190.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

SPE, Rupal Dharia, can be reached at (703) 305-4003. The fax phone number for the

organization is (703) 872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
